

Sandstone News 31.01.2013

Sandstone's 2-ft Narrow Gauge infrastructure continues to expand.

Below are a number of aerial photographs taken of the main Sandstone Estates complex. We have focussed on railway related activities in these pictures.

Photo 1 caption: This is the huge 150 metre long locomotive storage shed that was moved from Ficksburg and was used for many years to store our collection of 3'6" locomotives. We still have the floor to complete but it is in use. There is room for at least two more storage lines so in theory everything we own can go under cover now.

Photo 2 caption: This is an excellent photo showing the three main Heritage buildings at Sandstone. The one on the left contains traction engines and classic agricultural machinery. The middle one is the Running shed, and the one to the right contains our coaches and valuable items of rolling stock. Unrestored locomotives which were previously restored here have already been moved to the big new ex Ficksburg shed.

Photo 3 caption: This gives an idea of the marshalling yard on the Vailima side of the complex.
